

PRESENTATION OPTIONS

Wall fixture:

1 Attach with nails:

- Function: Fix your frames on the wall easily and inexpensively
- Available with profile(s): square, round, rectangle
- Tips: Hammer the nails in and let them sink in 15 mm. A level tool will help you perfect your installation. Position the frame. Like indicated in the sketch, it can be used laterally at your convenience.

2 Attached with adhesive:

- Function: Attach your frames on the wall in a non-permanent way (frames can be stuck many times)
- Available with profile(s): rectangle
- Tips: glue 2 or 4 blocks on the back of the frame, then remove the back transparent covering. Place on the wall. It can be moved many times by removing it from the wall carefully.

3 Attached with spacers:

- Function: Place your frames on the wall permanently and fashionably. Your display will seem to be floating in the air and can be changed very easily
- Available with profile(s): square, round, rectangle
- Tips: place your frame on the wall, then with help from a level tool and pencil, mark the place of the holes. Use a screwdriver to delicately screw the frame onto the spacers. Use of pins is optional, but it can make the display sturdier.
